

My name is Andreas Theocharous, I am from Cyprus and I am a first year undergraduate in Engineering.

I am going to keep this statement brief and clear.

Even though technology is becoming more and more specialized, it is important that each one of us has an idea of what is going on outside our little "shell" and that a sense of being part of a community is developed.

Being a rounded person that always wants to reveal the wider picture, I will be fascinated to explore, as your undergraduate representative at the Council of the School of Technology, your opinions on any matter and thus take actions for the benefit of the School's undergraduate community.
