

Hello! I am a Master's student studying applied mathematics, and am very excited for this opportunity to serve as a representative on the Council of the School of Physical Sciences. I have long been passionate about my education and that of others, and serving will allow me to share that passion with our 3000-strong student body. In my undergraduate years, I volunteered my time as president of several student-professional organizations, developing experience in effective leadership and communication. As your representative, I will be your tireless advocate for issues relating to educational policy and promotion of an inclusive student culture. I will use social media to actively consult the opinions and concerns of students throughout our School, and make sure all voices are heard. Thank you for considering me!
